

Exchange Synchronizer for VISMA Business

Product Information

Synchronize your VISMA Business calendar with Microsoft hosted & online environments

So you're using SuperOffice and you're a satisfied customer, except for one thing: your VISMA Business calendar doesn't synchronize with either your online Exchange environment like Microsoft 365 or hosted Exchange services offered by your IT supplier. Now you never know for sure if you have appointments planned for the day when you look into your VISMA Business calendar, which is inconvenient because you would like to fully rely on both your agenda's. With the Exchange Synchronizer EWS you will never have to worry about having two separate agenda's anymore, because it synchronizes both agenda's instantly so that both calendars contain the exact same data. Now think of what you would want and would expect from a synchronizer... Got your wish list for a synchronizer ready in your mind? Then we have good news, because this synchronizer lives up to all of your expectations.

Central Calendar

Exchange Synchronizer EWS enables you to maintain a

central calendar in Outlook that is visible for all users, whether they are using VISMA Business or not. Besides offering full support for any kind of appointment being used like private, recurring or all-day appointments, it also offers you full synchronization of meeting invitations.

Your agenda available on any device at any time

The Exchange Synchronizer EWS is suitable for any mobile or tablet device connected to your corporate Exchange server, so you will be able to look into your appointments from your favorite device at any time and it will always be up to date.

What's also important is that it does not only synchronize data to any device (including mobile devices), you can also edit data from any device and it still synchronizes with both agenda's. This way your agenda's will always contain the latest data with the latest changes, no matter which agenda you're using at the moment.
